Sat, 16 Feb 2019 17:21:00 GMT dehydration synthesis hydrolysis pdf - Nitriles are susceptible to hydrogenation over diverse metal catalysts. The reaction can afford either the primary amine (RCH₂NH₂) or the tertiary amine ((RCH₂)₃N), depending on conditions. In conventional organic reductions, nitrile is reduced by treatment with lithium aluminium hydride to the amine. Reduction to the imine followed by hydrolysis to the aldehyde takes place in the ...
