The most common operators are linear maps, which act on vector spaces. However, when using "linear operator" instead of "linear map", mathematicians often mean actions on vector spaces of functions, which also preserve other properties, such as continuity. Sun, 10 Mar 2019 04:44:00 GMT Operator (mathematics) - Wikipedia - The differential operator ∇ , also called nabla operator, is an important vector differential operator. It appears frequently in physics in places like the differential form of Maxwell's equations. In three-dimensional Cartesian coordinates, ∇ is defined: $\nabla = \hat{x} \frac{\partial}{\partial x} + \hat{y} \frac{\partial}{\partial y} + \hat{z} \frac{\partial}{\partial z}$. ∇ is used to calculate the gradient, curl, divergence, and Laplacian of various objects.
