Scalar linear congruential generators are ones of the most popular but, to enhance the statistical properties of the sequences, one may resort to vectorial (also called combined) and switched linear congruential generators. Examples include the swings of a pendulum clock, and the heartbeat while resting. (The limit cycle of an ideal pendulum is not an example of a limit cycle attractor because its orbits are not isolated: in the phase space of the ideal pendulum, near any point of a periodic orbit there is another point that ...
