Thu, 14 Feb 2019 02:57:00 GMT unraveling dna molecular biology for pdf - DNA repair is a collection of processes by which a cell identifies and corrects damage to the DNA molecules that encode its genome. In human cells, both normal metabolic activities and environmental factors such as radiation can cause DNA damage, resulting in as many as 1 million individual molecular lesions per cell per day. Many of these lesions cause structural damage to the DNA molecule ... Sat, 16 Feb 2019 21:31:00 GMT DNA repair - Wikipedia - DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 Ångströms (3.4 nanometres). - Introduction Taking isolated similarities by themselves, the theory of evolution appears to be quite reasonable... to a point. However, it seems that too much weight has been placed on similarities without questioning the differences.
